Fun with Science and Math for Parents and Children

[Insert the name of your library and/or your library's logo here.]

Help your child get ready to read by
learning about science and math.

language
e and
d you
cabula

Learning about the world.

Let's learn how to learn by exploring ice cubes!

1. **Question:** Does warm water affect ice?
2. **Predict:** Make a guess. Will the ice cubes in warm water melt differently than the ice cubes in cold water?
3. **Experiment:** Put some ice cubes in warm water and some ice cubes in cold water.
4. **Observe:** Watch the ice cubes closely.
5. **Conclusion:** What happens???

Start with questions.

How do trees get a drink of water?

Why can I see my breath when it is cold?

How much is one-half of something?

What is your question?

Explore the world with
your children every day.

Learning about the world
continues with math.

Helps children
learn about
math and ideas

Math concepts are easy to include in everyday conversation.

How many are there?

Which one is the largest?

Which one looks like a cone?

Can you put them in order from smallest to largest?

Keep your child's math concepts in mind when you measure. Start by comparing the height of your child to the height of the person measuring.

Read.Learn.Grow.

The updated and expanded 2nd edition of Every Child Ready To Read incorporates simple practices, based on research, to help parents and other caregivers develop early literacy skills in children from birth to age five.

Recognizing Shapes

- 1 Long thin Rectangle
- 2 Stars
- 2 Small Circles
- 1 Large circle
- 1 Large triangle
- 1 Moon

Clown Shape

Shapes: Tangrams

Recognizing Same & Different

When children explore same and different,

- They observe and talk about physical characteristics of objects.
- They talk about uses and/or functions of different objects
- They learn to sort a collection of different objects with shared attributes (characteristics).

Life Cycles

Butterfly Life Cycle Wheel

Book: The Very Hungry Caterpillar by Eric Carle

Life Cycles

Life Cycle of a Butterfly Stage 1: Egg

Butterflies develop through the process of complete metamorphosis. After mating, the female butterfly lays her eggs. She may lay her eggs on or near a plant that the young can eat, or she may drop them at random while in flight. The eggs vary in color, shape, and size. Some eggs may hatch in a few days, while other species will take months.

Life Cycle of a Butterfly Stage 3: Pupa

After the caterpillar reaches its full size, it begins changing to a pupa. Hanging from a twig or leaf, it encloses itself in a cocoon or a hard shell. This period can last from a few days to a year or more. Metamorphosis takes place within the shell during this "resting" stage. When the pupal stage is completed, the caterpillar emerges as an adult butterfly.

Life Cycle of a Butterfly Stage 2: Larva

Looking nothing like the adult butterfly, the larva, or caterpillar, hatches from its egg and begins the eating process, starting with its own eggshell. Over a period of two or more weeks, the larva also feeds on leaves and other plant parts. It grows quickly, requiring it to shed its outer skin. When the caterpillar is fully grown, it is ready for the next stage in the metamorphic process.

Life Cycle of a Butterfly Stage 4: Adult

The adult butterfly cracks open the hard shell or cocoon and pushes itself out. It takes about one hour for the butterfly's wings to dry and harden so that it can fly. Most adult butterflies live only one or two weeks.

Some species may survive as long as 18 months. Most butterflies eat nectar, but some feed on pollen or on fluids from decaying animal matter.

Life Cycles

Order of Life Cycle Stages

Butterfly Eggs ⇨ Caterpillars ⇨ Chrysalis ⇨ Butterfly

Ladybug Eggs ⇨ Ladybug Larva ⇨ Ladybug Pupa ⇨ Ladybug

Grasshopper Eggs ⇨ Grasshopper Nymph ⇨ Grasshopper

All Things STEAM

All Things STEAM

Welcome to All Things STEAM, a resource for offering library programming in science, technology, engineering, arts, and mathematics. When it comes to developing my STEAM programming, I have a number of go-to resources that I use for inspiration and concept knowledge support. I've gathered links to those resources, my program how-tos, and other STEAM resources for your convenience. I'll be updating as I have more links to share, so bookmark this page and get programming! And if you'd ever like to bounce ideas around, please comment here or start a conversation on Twitter (I'm @amyeileenk). I'm always up for a STEAM discussion.

My Library's STEAM Programs

HOW DO WE MEASURE UP?

What's the BIG Idea?™

Making Math and Science Come Alive for
Children and Families in Your Library

Librarian Manual

www.mathpowerprograms.org
<http://www.mathpowerprograms.org>

What's the BIG Idea?

What's the BIG Idea? focuses on the four “BIG Ideas” of math and science that early childhood education experts say that children need to encounter and begin to have experience with before they begin school.

- Patterns and Relationships
- Change Over Time
- Geometry and Spatial Sense
- Numbers and Operation

What's the BIG Idea?

Librarians can help young children develop these essential science inquiry skills through simple and fun science activities.

- Classifying
- Communicating
- Comparing and Contrasting
- Gathering and Organizing Data
- Creating Models
- Measuring
- Observing
- Predicting

There are 14 kits in the What's the BIG Idea™ series:

- Building
- Collecting & Sorting
- Construction
- Counting 1-2-3
- Exploring Growth
- Exploring Shapes
- Exploring Weather
- Making Sets
- Maps and Directions
- Number Patterns
- Part-Part-Whole
- Patterns & Relationships Everywhere
- Recognizing Same & Different
- Shadows

Building

What do young children learn when they **build**?

- They learn about problem solving and experimentation.
- They learn how to **communicate** our ideas when we talk about tools, shapes and design.
- They learn about **geometry** by seeing how shapes fit together.

The goals of this **What's the BIG Idea?** kit:

- To build structures with a variety of materials, to observe how different building materials have different strengths and limitations.
- To decide what function a building will have and work to design and build a structure to meet that need.

About Growing Up WILD

Growing Up WILD is an early childhood education program that builds on children's sense of wonder about nature and invites them to explore wildlife and the world around them. Through a wide range of activities and experiences,

Growing Up WILD provides an early foundation for developing positive impressions about the natural world and lifelong social and academic skills.

The activity guide, *Growing Up WILD: Exploring Nature with Young Children*:

- Is written especially for early childhood educators of children ages 3-7.
- Features 27 field-tested, hands-on, nature based activities in a full-color 11"x17" activity guide.
- Includes crafts, art projects, music, conservation activities, reading and math connections and much more.
- Involves social, emotional, physical, language, and cognitive

Welcome to Simply S.T.E.M.

Simple Ideas for S.T.E.M. Programming in Libraries

Welcome to Simply S.T.E.M. There is a growing movement to include more S.T.E.M. content in library programming. But ideas that work in a classroom don't always work in a library. A librarian could spend hours searching websites and Pinterest for activities and still have to pull it all together in a program plan. This wiki is a place where librarians can share and find **complete plans** as well as more general ideas. Please add your ideas and favorite resources! Also, be sure to let us know what works for you if you use ideas you find here.

What is S.T.E.M.?

S.T.E.M. stands for Science, Technology, Engineering and Mathematics. But S.T.E.M. programming is more than just helping kids discover new facts about the world around them. It is about promoting a deeper understanding of concepts and scientific practices.

Why S.T.E.M. is important:

The [National Math and Science Initiative](#) provides a great summary in their publication, [Why STEM Education Matters](#). Some of the highlights are:

- That's where the jobs are, and they are higher paying jobs.
- The U.S. is failing to produce enough STEM workers.

Preschool Programs

32

S.T.E.M. for Preschoolers

Many of the activities we already use in Storytime and Preschool Programs include S.T.E.M. concepts. Whether it's counting rhymes or activities about farm animals, you're probably already off to a good start. Here are some ideas of programs you can adapt to your library. Some of these ideas were created for an online class and may not have been tested on actual preschoolers. Your mileage may vary.
